

## ENGLISH LANGUAGE PAPER 4

### GENERAL INSTRUCTIONS

*This paper consists of two parts: Part A, Group Interaction; and Part B, Individual Response. Part B will immediately follow Part A. DO NOT write anything on this page.*

### PART A Group Interaction

*You will be given 10 minutes to prepare. The time allowed for the group interaction is 8 minutes (or 6 minutes for a group of 3 candidates). You may make notes on the notecard provided and refer to your notes during the discussion.*

### Artificial Intelligence and Its Growing Impact on Society

In recent years, artificial intelligence (AI) has developed rapidly and is now influencing many areas of daily life. AI systems are used in industries such as healthcare, transportation, finance, and entertainment.

For example, companies like Tesla have developed self-driving technology that uses AI to analyse road conditions and help vehicles navigate safely. At the same time, AI tools such as ChatGPT created by OpenAI are increasingly used to assist people with writing, research, and customer service.

AI has also played an important role in healthcare. In several countries, hospitals are testing AI systems that can analyse medical images and help doctors detect diseases earlier. Experts believe this technology could improve the accuracy and speed of medical diagnosis.

However, the rapid development of AI has also raised concerns. Some people worry that AI may replace human jobs in industries such as customer service, transportation, and manufacturing. In response, governments including the European Union have started introducing regulations to ensure that AI technology is used responsibly and safely.

As AI continues to develop, many people believe it will bring both opportunities and challenges to society.

You and your classmates are helping to organise a school forum about the impact of artificial intelligence on society. You may want to talk about:

- which industries are most likely to be affected by artificial intelligence
- the advantages and disadvantages of using AI in daily life
- how governments and companies can ensure that AI is used responsibly
- anything else you think is important

### PART B Individual Response

*The examiner will ask you one or more questions based on Part A. You will have up to 1 minute to respond.*

**PART A Group Interaction**

**Artificial Intelligence and Its Growing Impact on Society**

In recent years, artificial intelligence (AI) has developed rapidly and is now influencing many areas of daily life. AI systems are used in industries such as healthcare, transportation, finance, and entertainment.

For example, companies like Tesla have developed self-driving technology that uses AI to analyse road conditions and help vehicles navigate safely. At the same time, AI tools such as ChatGPT created by OpenAI are increasingly used to assist people with writing, research, and customer service.

AI has also played an important role in healthcare. In several countries, hospitals are testing AI systems that can analyse medical images and help doctors detect diseases earlier. Experts believe this technology could improve the accuracy and speed of medical diagnosis.

However, the rapid development of AI has also raised concerns. Some people worry that AI may replace human jobs in industries such as customer service, transportation, and manufacturing. In response, governments including the European Union have started introducing regulations to ensure that AI technology is used responsibly and safely.

As AI continues to develop, many people believe it will bring both opportunities and challenges to society.

You and your classmates are helping to organise a school forum about the impact of artificial intelligence on society. You may want to talk about:

- which industries are most likely to be affected by artificial intelligence
- the advantages and disadvantages of using AI in daily life
- how governments and companies can ensure that AI is used responsibly
- anything else you think is important

**PART B Individual Response**

1. What examples of artificial intelligence can you see in daily life?
2. Do you think AI will make people's lives easier?
3. Which jobs do you think AI might replace in the future?
4. Do you think AI technology can be trusted to make important decisions?
5. How can artificial intelligence improve healthcare or transportation?
6. What risks might arise if AI technology is not properly regulated?
7. Do you think people should learn more about AI in order to use it responsibly?
8. In your opinion, how will artificial intelligence change society in the next 20 years?
